

How to use it - step by step

1	Describe the real situation and name the human decision owner.
2	Use the included artifact with your actual evidence, inputs, and constraints; mark unknowns rather than guessing.
3	Run the steps/checks and surface conflicts, failures, and missing evidence.
4	Review the output against the stated limits and patch or re-run where needed.
5	A human decides whether to approve, revise, stop, or roll back, and saves the dated record.

What you get

INCLUDED	A structured artifact you can use to make the work more visible, repeatable, and reviewable. See the current product page for the exact package contents.
-----------------	---

Before you start

Have the real problem, a named human owner, the best current evidence or inputs you can reasonably gather, and any constraints that could change the answer. You do not need to know Q10 vocabulary before using the artifact.

A simple example

ILLUSTRATIVE EXAMPLE - NOT FIELD EVIDENCE	Imagine a person or team needs to handle this job: Understand Q without technical language. Instead of starting from a blank page or relying on memory, they use this Free tool to make the inputs, checks, evidence, unknowns, and next decision visible. They review the result with the human owner before acting and keep the dated output so the work can be checked or updated later. This is an illustrative use example, not a customer case study or field-validation claim.
--	---

What good looks like

A reviewable output that shows what you used, what the artifact found or produced, what remains uncertain, and what the human owner decided next.

If you only remember 3 things

- Purpose: Understand Q without technical language.
- Evidence: useful structure or test results are not the same thing as independent validation, certification, or guaranteed outcomes.
- Authority: a human decides what to approve, revise, stop, or roll back; the artifact does not authorize itself.

What this does NOT do

BOUNDARY	No unstated certification, professional opinion, production authorization, or guarantee is implied. Review the product page and current evidence before consequential use.
-----------------	--

Evidence and readiness - in ordinary language

STATUS	Access: this is listed as a free/public artifact or zero-dollar resource.
STATUS	Evidence recorded: no product-specific proof statement is present in the current registry; treat this as a structured starting artifact, not proof of outcome.
STATUS	Delivery record: PUBLIC_DIRECT_READY.
STATUS	Authority: the artifact can support a decision, test, build, or review; it does not grant itself authority to take consequential action.

Technical / provenance appendix

Q ID	QP-001
Product name	Q Explained
Family / subject	Education
Product form	Free tool
Source class	CANONICAL_82
Commercial state	INLINE_READY
Price / range	\$0
Delivery type/state	LOCAL_ZIP_PASS
Factory status	PUBLIC_ARTIFACT_EDITION_BUILT
Release decision	PUBLIC_DOWNLOAD_READY
Buyer PDF state	COMPLETE_BUYER_SPEC_PDF
Shopify file binding	not recorded
Q spine / source basis	not recorded
Current notes	v3.1: customer ZIP built and integrity-tested; no hosted runtime, staffed service, certification, independent assurance, or legal rights implied unless explicitly included.
